

ReclaimKit - Quick Start

Thomas Gollogly

ReclaimKit — Quick Start

Remove harmful Facebook content + Google results — UK GDPR path.

1. Install (5 minutes)

```
git clone https://github.com/tgollogly/stop-assholes.git
cd stop-assholes
pip install -r requirements.txt
python3 main.py init
```

2. Configure

Edit config.yaml :

- Real **email, address, phone**
- `post_origin`: uncertain if unsure who posted (safest)
- `meta_reports` — add Meta “We didn’t remove” rejection

Copy screenshots → `evidence/screenshots/`

3. Start campaign

```
python3 main.py campaign init
python3 main.py doctor
```

4. Email Meta (most important)

Open `output/campaign-package-.../round-01-meta/meta_r1_gdpr_initial.txt`

- **To:** `privacy@facebook.com`
- **Subject:** include case reference (e.g. TG-ER-THOMAS-GOLLO-META-R1)
- **Attach:** all screenshots

```
python3 main.py campaign sent --track meta --round 1
```

5. Parallel tracks

- **Google:** `python3 main.py monitor` → submit delisting if URLs found
- **VPS (optional):** `cd deploy && docker compose up -d --build` (~£5/mo)
- **Auto-email (optional):** [AUTO-EMAIL-SETUP.md](#)

6. If Meta ignores (after 7 days)

```
python3 main.py campaign no-response --track meta
```

7. When removed

```
python3 main.py campaign success
python3 main.py close
```

Doc	Purpose
COMPLETE-GUIDE.md	Full guide (PDF available)
AUTO-EMAIL-SETUP.md	Free Gmail auto-send
../deploy/VPS-GUIDE.md	Cheap VPS + Docker
../deploy/README.md	VPS deploy details

```
./scripts/audit.sh    # verify entire repo
```

Not legal advice. Templates use UK GDPR Article 17 — same channels paid firms use.
